Phoenix, AZ 85004 | (602) 989-0281 | lilith.froude@gmail.com | [linkedin.com/in/lilithfroude](https://www.linkedin.com/in/lilithfroude) | github.com/lilithfroude-ctrl/Portfolio

Business professional transitioning to technical AI/ML roles through MS in Artificial Intelligence in Business (4.0 GPA). Technical portfolio includes machine learning pipelines, full-stack blockchain development, and real-time data visualization. Combines business acumen with hands-on Python, TensorFlow, SQL, and React experience. Seeking data science, ML engineering, or AI product roles.

WORK EXPERIENCE

BUSY BEES BABYSITTING

Tempe, AZ

AI/ML Consultant - Graduate Capstone

Jan. '26 – Present

- Analyzing 50K-75K operational transactions (24-month dataset) to identify automation opportunities across childcare platform workflows; mapping current processes for Bee onboarding, payment management, and customer support
- Designing agentic AI workflow recommendations using Python and natural language processing to streamline Stripe payment tracking, background check verification, and customer inquiry triage
- Building predictive models to distinguish high-priority customer requests from exploratory inquiries; developing implementation framework with measurable time savings and efficiency metrics

ARIZONA STATE UNIVERSITY

Tempe, AZ

IT Helpdesk Coordinator 2 - Financial Systems

Aug. '24 – Present

- Resolve complex financial aid discrepancies for 80,000+ students by navigating federal loan systems, scholarship databases, and grant tracking platforms; troubleshoot technical and financial issues across PeopleSoft and Banner
- Advise students and parents on financial aid packages (federal/private loans, scholarships, grants); translate complex financial data and compliance requirements (FERPA, Title IV) into actionable guidance
- Document recurring issue patterns and technical solutions to build internal knowledge base; collaborate with financial systems teams to escalate and resolve platform-level errors

CROWDCTRL

Remote

Founder & Systems Architect

Aug. '23 – Aug. '24

- Architected blockchain event ticketing system using Solidity smart contracts on BASE/Ethereum L2; built NFT tickets (ERC-721) with royalty distribution, max resale limits, and verifiable ownership to eliminate fraud and scalping
- Led technical infrastructure decisions for decentralized platform integrating Next.js frontend with Web3 wallet connectivity; defined smart contract architecture and gas optimization strategies
- Managed cross-functional startup environment coordinating between technical development, business strategy, and go-to-market planning; experience drove transition toward formal technical education

ALGORAND FOUNDATION

Remote

DevOps Marketing Intern

May '23 – Aug. '23

- Analyzed multi-channel campaign data using Python (pandas, matplotlib) to segment audiences by engagement metrics; identified high-performing segments that informed \$100K+ ad spend allocation
- Automated weekly analytics pipeline using Python scripts to aggregate data from Google Analytics, social platforms, and CRM; reduced manual reporting time by 50%
- Conducted A/B testing analysis using statistical hypothesis testing to evaluate creative variants; presented data-driven recommendations to marketing leadership

EDUCATION

ARIZONA STATE UNIVERSITY

Tempe, AZ

MS, Artificial Intelligence in Business

Expected May '26

GPA: 4.0 | Relevant Coursework: Machine Learning in Business, Enterprise Data Analytics, Business Data Visualization, Programming for AI and Data Analytics in Business, Analytics for Unstructured Data, AI and Data Analytics Strategy, Data & Tech Governance in Business, AI Business Strategy

GRAND VALLEY STATE UNIVERSITY

Grand Rapids, MI

BBA, Marketing & Entrepreneurship | Minor: Digital Studies

May '23

PROJECTS

AI-AUGMENTED BLOCKCHAIN GOVERNANCE RESEARCH

Spring '26

- Authored 120+ page systematic literature review analyzing 100+ academic papers on DAO governance failures; proposed integrated framework combining zero-knowledge proofs, fairness-aware ML, and adversarial defenses to reconcile trust-minimization with democratic legitimacy

MACHINE LEARNING PROTEIN PREDICTION PIPELINE

Fall '25

- Reduced drug discovery screening from 6-18 months to minutes using Python ML pipeline (BiLSTM, Random Forest, Isolation Forest) on 15K+ protein sequences; achieved 71.98% accuracy, potentially saving \$100K-\$500K per structure

COMMUNITYTAP – CROWDFUNDING PLATFORM

Fall '25

- Rapid-prototyped full-stack SaaS platform in 48 hours using Cursor AI, Claude, and Git; built with React, TypeScript, SQL, and Stripe for real-time crowdfunding with user authentication

SKY HARBOR AIRPORT DASHBOARD

Fall '25

- Built real-time interactive dashboard using Python (Streamlit, Matplotlib) and Tableau visualizing Phoenix Sky Harbor ride-hailing data with dynamic service tracking (Uber, Lyft, Wymo, Taxi) and live statistics

LEADERSHIP AND ACTIVITIES

- President, AI and Crypto Club – Arizona State University: Lead weekly technical discussions on ML architectures, blockchain protocols, and organize industry networking events with 50+ active members
- Entrepreneurship: 2nd Place, GVSU DEMO Day Pitch Competition | National Semi-Finalist, E-Fest Pitch Competition | National Semi-Finalist, Smith College Draper Competition | Selected for 77 Ideas Lab (12 teams from 100+ applicants)
- StandWithCrypto Volunteer: Organized bi-weekly community meetups to educate users on blockchain technology and crypto policy; tracked industry developments and legislative changes including Arizona House Bill 2749

SKILLS

Technical Skills: Agentic AI, Python, TensorFlow/Keras, scikit-learn, Pandas/NumPy, MySQL, Feature Engineering, NLP, Unstructured Data, React, Next.js, TypeScript, Node.js, Tableau, Git, Google Colab, Cursor

Product Skills: A/B Testing, User Research, Competitive Analysis, Wireframing, Road Mapping
